Stay green and save green

In our continuing efforts to stay GREEN, SPS recommends periodically checking your spa ozone. Whether or not it is properly working it is still using power! Non-working ozone units cost electrically and generally consumers will use more chemicals. Ozone units have changed over the years and are now more efficient than ever while outputting more of the ozone gas. Properly sized ozone units can cut down chemical use in a hot tub by up to 50%.

**Don't forget, the early bird discount for pool opening ends April 15th,
and our super sale starts April 15-18th 2010**

Find us on Facebook search Swimming Pool Services.

Email sales@swimmingpoolservices.com with any questions regarding ozone or any tips that you would like us to address in the future.
