## **Everyone wears layers of warmth on a cold day**

Most heat loss in an outdoor spa is straight up, through the cover. We live in a harsh climate and when it gets cold it may take more energy to maintain the hot tub heat. Spa owners should use a 6'x6', 7'x7' or 8'x8' size depending on the inner dimension of the hot tub. A spa blanket floats on top of the water, underneath the actual spa cover and simply provides an added layer of protection for keeping heat in the water, not outside! Spa blankets are quick and easy while helping cut down on the expense of electricity.
