Chem college graduates do it better!

Does your current water chemistry program take too much time and consistently leave undesirable water? There are many options available to spa owners in this day and age to keep the water clean. Chlorine, Bromine, Softsoak and mineral packs are all different avenues to achieve the same end, clean water. Have your water professionally tested and talk with the chemistry expert about your families needs. Based on those two important pieces of information you can make an educated decision about what fits your individual spa and its users. If you are not happy with what you are using, discontinue it and talk with a chemistry expert about something different.

Email sales@swimmingpoolservices.com with any questions regarding water chemistry or any tips that you would like us to address in the future.
