80 degrees today, snow in the forecast for tomorrow...should I close my pool now?

When the temperature drops below 60 degrees it is a good time to get your pool closed to prevent bacteria growth. It is good to try to close early to avoid excessive cleaning from leaves and other debris. Prior to closing, make sure to bring a water sample in to the store so that you can assure your water is balanced. Remember to keep your pool circulating up until closing to prevent freezing.
